

How Scrum helps to thrive under pressure

THE REAL SCRUM EXPERIENCE

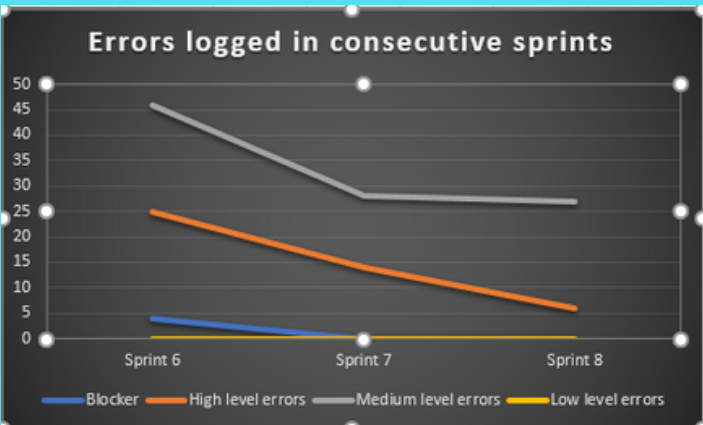

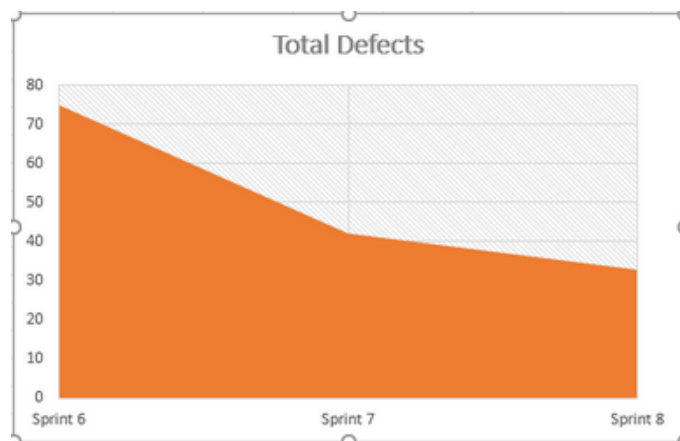

NARROWING GAP BETWEEN ASSIGNED AND ACCOMPLISHED STORY POINTS

After scrum the team is able to accomplish all the assigned story points as evident from Sprint 6 onwards

TOTAL DEFECTS MOVE SOUTH

The success of scrum is evident from Sprint 6 where the total defects reduces as the team gain better experience and move with the scrum cadence

BLOCKERS REACH ZERO

Blockers stop project delivery. It is imperative that the team strive for a no blocker day. But the collaborative nature of Scrum encourages people to stand up immediately and ask for help against the blocker

IMPEDIMENTS IDENTIFIED

Scrum helps to identify impediments and learn from mistakes. Stand up meetings are collaborative discussion grounds to identify, plan and validate processes.

THINK OUT OF THE BOX TO THRIVE

Scrum teams quickly find errors, make changes and rapidly adapt their machine learning system to ensure it is always improving. Scrum has empirically proven to have improved learning to ensure on-time high quality products.
